A few things to note about the innovative 409.

It has one of the largest, most comfortable cockpits in the industry with a very large table that functions for bracing while sailing, and dining, but also is easy to get around.

The Jeanneau 409 offers an innovative main and Genoa handling system with all lines brought back, under the uncluttered deck to the control cockpit. You can tack and handle the boat yourself without requiring others to move from the dining table. This is a system that other boats will eventually adapt, and will be a “*must have*” feature enhancing the resale market later. Visibility is exceptional from the helm, or the outboard seats with a very low profile coach roof. All lines from the mast return under cover to eliminate clutter and protect the lines from the sun. Even the hatches are flush, and include a custom, flush forward hatch. Every effort has been made to keep the deck clean and uncluttered.

The 409 uses sophisticated, resin injection technology for the deck that results in a 30% lighter deck. This combined with a carefully engineered hull and structural grid gives a much lower center of gravity that improves sailing performance and minimizes hobby horsing. The 409 is very fine in the bow, and this design feature combined with the low center of gravity will result in the most comfortable motion comfort rating while sailing. There is a large double sink, and good galley storage, with additional bin storage under the sole. The head has a large, separate shower in the main head. She is available with 2 or 3 cabins and one or two head layout configurations.

Inside, the slightly raised saloon provides additional storage under and behind the seat backs with pneumatic assist. Further, the 409 incorporates a combination of large, easy to see out of windows while standing, but additional large windows in the hull that you can see out of when sailing or at anchor while sitting. All lighting below is LED for an 80% reduction in power consumption. The Nav lights are also LED.
